Case Study

Intra-day recommendation is the same as Daily recommendation

When BOTH our *intra-day* and *daily* recommendations are both long (or short), this means our view is strong and the probability to make money on both trades is also high.

Intra Intra-day recommendation is opposite to Daily recommendation

This happens when we anticipate a minor correction to occur initially in the magnitude of 30-50 points before the prevailing trend resumes later in the day (3-5 hours), therefore, for intra-day trade, one can take this counter-trend strategy to benefit this situation. However, this is sometimes a high risk trade for intra-day trading, one must be 'quick' to exit this position as per our intraday recommendation.
